

New EcoSink Series

**Commercial | Residential**  
The Missing Link for the Sink

# ScrapDrain™

ScrapDrain is the sustainable safeguard for every kitchen sink. It captures food scrap before it enters the drain system with greater capacity & easier collection to help promote daily **landfill diversion**.

The new **EcoSINK** series delivers 8x more capacity than the average strainer.

Wash dishes as normal while ScrapDrain strains away the liquid, seamlessly separates solids, and presents a one-step easy transfer for organics pickup, drop-off program or local composting.

## ScrapDrain is the missing Link for the Kitchen Sink

### EcoSINK Series

#### Functional & Environmental Advances using ScrapDrain:

- **IMPROVES** wastewater quality by reducing total suspended solids and FOG<sup>1</sup>
- **PREVENTS** scrap solids from causing clogs in drain lines & the sewer system
- **SIMPLIFIES** organics collection from the sink & streamlines recycling process
- **DIVERTS** organic food waste from LANDFILL to reduce greenhouse gases
- **REPLACES** electric disposals with a more environmentally-friendly alternative
